WHAT MAKES US WHO WE ARE

At A-SAFE we are defined by who we are as much as by what we do. Our values are the foundation for our passion, our products and the strong relationships we forge with our customers.

We are pioneers

Forge not follow

From our very first invention to every process and customer interaction, we are encouraged to be brave, be dynamic and explore the possible and seemingly impossible. Big or small, it all makes a difference. The key is to always try new things, to learn, adapt and move forward. With a shared sense of enterprise and adventure, we never, ever give up and ask ourselves every day, what if?

1984
A-FAX Films is established, specialising in polythene extrusion.

2001
Flexi Barrier invented.

2009
Major installation at Gatwick Airport with **£100,000+** saving per year in maintenance costs.

100m Steel Barrier - Total Cost over 5 Years
£46,210

100m A-SAFE Barrier - Total Cost over 5 Years
£7,220

2015
The drive for continuous improvement leads to the launch of our 3rd-generation barrier range.

2017
A-SAFE continues to revolutionise workplace safety, saving more lives than any other safety barrier.

2018
Our global presence reaches 15 countries, with 16 subsidiaries worldwide.

2019
Customer problems increasingly require digital solutions, prompting us to launch our technology division.

Scientifically Engineered Safety

Whether in the resilience, flexibility and in-built memory of our exclusive Memaplex™ material or the unrivalled energy absorption of our patented 3-phase coupling system, every A-SAFE product is loaded with scientific and technical ingenuity to ensure that it performs perfectly every time you need it to.

- More advanced engineering
- More safety features
- Performance you can trust

FLEX

ABSORB

RECOVER

Material Science

Ultimate strength polymer created from an exclusive composition of the most sophisticated polyolefins and rubber additives, expertly blended for unequalled strength and flexibility.

MEMAPLEX™

- Advanced Engineering Molecular reorientation during manufacturing creates a unique built-in memory that enables the barrier to fully recover following impacts.

Revolutionary 3-Layered Material

- Inner strengthening core
- Central impact absorption zone
- Outer UV stabilised colour layer

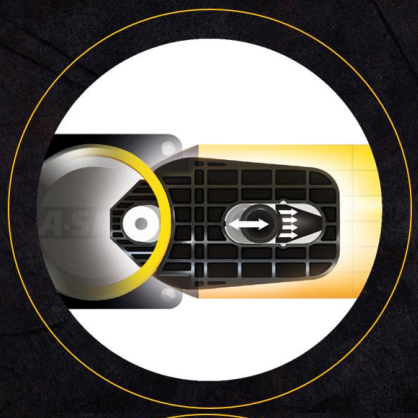
- Chemical resistant and non-corrosive
- Food-safe, wipe clean and self-coloured
- Suitable for temperatures -10°C to 50°C

MEMAPLEX™ SUB-ZERO

- Specifically designed to deliver optimum protection and flexibility in very cold temperatures
- Able to withstand impacts in sub-zero environments as low as -30°C
- Chemical resistant and non-corrosive
- Food-safe, wipe clean and self coloured

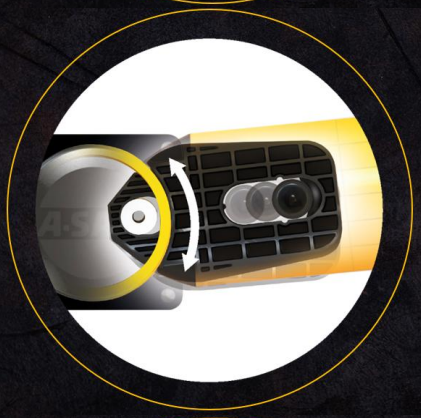
Energy Absorption System

A patented 3-phase system that activates sequentially for unparalleled energy absorption.



PHASE 1

Rail flexes to absorb impact, initiating the rail pin to slide forward and transfer load energy to the compression pocket.



PHASE 2

Compression of the pocket continues to disperse energy as the coupling rotates around the post pin to activate further absorption.

PHASE 3

At peak energy, the coupling twists further, engaging the post pin and instigating torsion of the post to dispel remaining forces.

We do the right thing

From start to finish

There's a right way and wrong way to do things – it's in our DNA to do the right thing, without compromise. Whether we're creating, thinking, making or building – solutions, things or relationships – we take personal ownership of the whole process, finding better ways to do things than any third party could. From safety to risk reduction, protection to cost savings, whatever the problem, we never sit back while someone else does the work, we find the very best way of solving it.

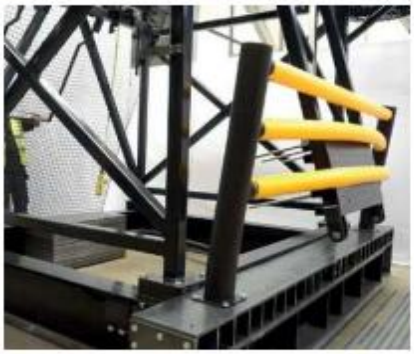
Tested to the global benchmark in barrier safety

bsi. PAS13
Code of Practice for Workplace Safety Barriers

Independently verified by world-class test experts

TÜV NORD

We perform an average of **5 impact tests a day** and over **1,000 tests annually.** That equates to more than **10,000** tests since creating our in-house test facility.



That's why we're trusted by the world's biggest companies

A-SAFE the greener option

Total CO2 output for 100m barrier runs of iFlex Double Traffic and Twin Rail Armco.

3,678
Total CO2 eq (kg)

iFlex Double Traffic 100m run @ 2.2m post centres

Material	Total Weight (kg)	CO2 eq/kg	Total CO2 (kg)
Steel	338	1.85	626
Polypropylene	1,369	1.63	2,232
Polycarbonate Alloy	241	3.4	819.5

6,059
Total CO2 eq (kg)

Galvanised Steel Twin Rail Armco 100m run @ 1.6m post centres

Material	Total Weight (kg)	CO2 eq/kg	Total CO2 (kg)
Steel	3,275	1.85	6,059

1,949kg
Total weight of iFlex Double Traffic (100m run)

3,275kg
Total weight of Armco Twin Rail (100m run)

60%

Because the iFlex product only weighs 60% of the Armco product, it will only produce 60% of the CO_2eq when transported to the customer.

Weights of Armco taken from https://firstfence.co.uk/armco-barrier-systems
Weights of iFlex components taken from Netsuite BOMs.
Steel CO_2eq taken from https://orbit.dtu.dk/en/publications/cosub2sub-emissions-from-building-lifecyclessub
PP and PC CO_2eq taken from the latest Plastics Europe Eco Profiles Available as at 31/10/2022. No data available for TPE so PP used instead. Concrete fixings, bolts on iFlex posts and bolts holding Armco rails to posts not included.

A-SAFE

Why invest in tested and certified barriers?

> "The movement of goods and materials involves the use of a wide range of vehicles and accounts for a large proportion of accidents in the workplace."
>
> **PAS 13:2017**

Approximately **50** People are killed in the workplace each year in the UK*

And more than **5k** People are injured by workplace vehicles in the UK*

In the US **44%** Of people have been injured in the workplace**

In the US **63%** Of people have witnessed or are aware of an injury in the workplace**

*Source: YouGov Workplace Safety Report 2020 **Source: YouGov Workplace Safety Report 2022

A-SAFE

Unrivalled Performance

- Exclusive shock absorbing Memaplex™ polymer
- Purpose-engineered built-in memory for full recovery and repeat use
- Patented Coupling Technology reduces and dissipates dynamic load energy for unequalled energy absorption
- 80% of impact force is absorbed
- No floor damage, preserved fixings
- Reduced maintenance, repair and replacement
- No repainting as system is self-coloured
- UV protected and tested to ISO 4892-3
- Colour fast to 7/8 on the Blue Wool Scale
- ISO 868 — Abrasion resistant with a hardness of 66 to ISO 868
- ISO/TR 10358 — No corrosion and chemically inert to ISO/TR 10358
- Material complies with EU & FDA food contact regulations
- Hygiene seals eliminate ingress points
- Electrophoretic coated bases tested to withstand 2000 hours exposure to accelerated salt spray with no rust
- Modularity allows rails and posts to be replaced independently without removing adjacent barriers
- bsi. PAS13 — Performance rated and compliant to PAS 13:2017
- TÜV — TUV certified

TERMS & CONDITIONS

		Notes
Quotation Validity:	30 Days	From date of quotation
Lead time:	10-12 weeks	Subject to availability

		Payment due
Payment terms:	50% pre-payment upon order confirmation balance payment for material & carriage cost 30 days from date of material delivery	
	100% installation due 30 days from installation completion	
Warranty	24 Months	Against manufacturing defects

Concrete bases are required where a suitable concrete floor slab is not available. This is not included in the above quote unless listed.

It is the clients responsibility to offload the materials/pallets from the delivery vehicle at the destination unless specifically mentioned above. It is the clients responsibility to store the materials in a suitable location at the site prior to installation unless otherwise stated above.

Images as depicted on the product details are for representational purposes only, and may not picture the actual product quoted for.

Our standard products are produced with yellow impact rails and black posts units to provide hazard warning colouring (unless otherwise specified) within typical working environments.

Please note that although all of our products are UV stabilised for impact performance, the yellow colour is primarily intended for internal use as direct sunlight may cause some degree of bleaching effect over a period of time.

If the quoted barrier is for external application likely to be in direct sunlight, consideration should be given to accepting the impact rails in either a grey or black colour.

The above prices include the supply of all standard zinc galvanized post floor-fixing bolts, unless specified otherwise as stainless steel/ countersunk/ chemical fixings, etc.

Please note we do not accept retention deductions or any contractor discounts
In the case where installation is unreasonably delayed by Client after delivery of products (>10days), A-Safe reserves the right to issue the final invoice for 100% of the order value.

All products remain the property of A-Safe until final invoice payment is received.

Asafe is not responsible for the removal of any existing barriers, bollards or floor repair works unless specifically listed in the quotation above. Any requirements for such barrier removal and site repair works would need to be handled by the client prior to Asafe conducting their installation works.
